

Enterprise Information Portals

Portals:

- Ease decision making
- Enhance communication
- Integrate with your existing applications
- Are personalized and secure

Improved Information Management

Implementing a Portal simplifies your technology infrastructure by making more information and applications easily accessible from the Internet. Portals are personalized, secure and compatible with your existing data and software. They offer centralization of your corporate applications through a consistent interface and allow your employees access to critical information for decision making.

Portal architecture integrates with your existing enterprise applications, information sources and legacy systems for delivery to any group of users – employees, partners or customers. Portals incorporate innovative services that add valuable functionality, simplify use and allow you to customize and personalize the presentation of information. Authorized users can access vital enterprise information from anywhere through the Internet.

Portals can improve your company's communication and customer service, automate internal processes and provide easily customizable reports. Imagine all your important information in one location, accessible from anywhere you can connect to the Internet.

Valuable Functionality

Portals can be personalized for users and departments and combine applications, document systems, databases, information feeds, reports, news sources, collaboration services and other Internet content. They can be deployed quickly and customized easily. An open framework ensures smooth integration with your data and systems.

The following items are some of the functionality you can get with a portal in one user-friendly, interactive, web-based interface:

- **Forum** – a section of the portal that can be used for information exchange through threaded discussions. The forum can improve communication across your company.
- **Announcements** – provides the ability to send announcements, both internally and to your clients. This can enhance marketing efforts and improve teamwork. You can easily add attachments to the announcements; graphics, documents or any other files.
- **Calendar/Events** – basic calendaring capabilities with the choice of each event being private or public. You can even have automatic email reminders sent about events.
- **Contacts** – a central place for contacts that can be accessed from anywhere via the Internet.

- **What's New** – highlights what is newly posted on the portal, tracks what has not been viewed by a user at an individual level.
- **Reporting** – Employees can access information to make critical business decisions. Users can get the reports they need without having to ask IT, so IT staff can focus on core business processes.
- **Tree view** – hierarchy of document folders, or channels, along the side menu. Makes navigation easy and quick.
- **Custom Skin** – the user interface can reflect your existing corporate identity, including logo and color scheme.

Portal Benefits

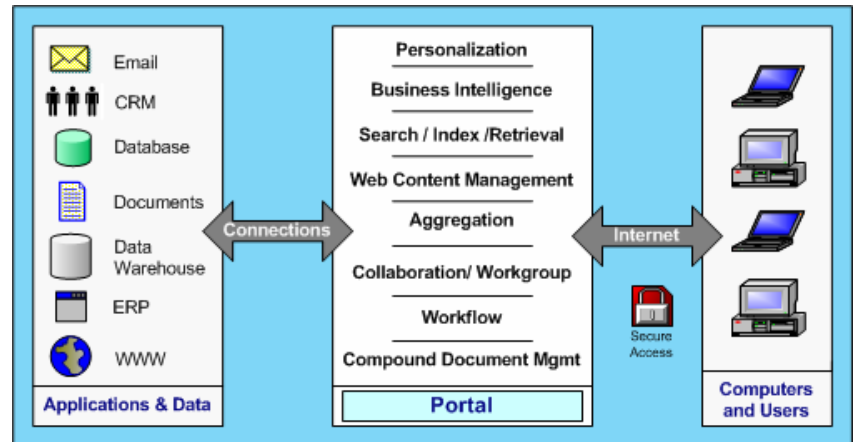

Portals allows you to give your employees, customers and partners the information they need to make better business decisions leading to increased revenues, increased customer loyalty and streamlined operational costs.

Portals enable businesses and organizations to:

- Provide secure access to structured data sources for reporting and analysis
- Integrate applications and information sources into a single interface
- Communicate with business partners
- Increase sales
- Create new revenue channels
- Enable employees to make better business decisions

Integrated Security

Portals have integrated security to ensure that vital information is protected. User and group rights are easily assigned by an administrator and managed using industry-standard authentication, authorization and application security.

Flexible Technology

Portals are scalable, flexible and integrate with your existing applications and data sources. They can support Windows NT, Windows 2000 and UNIX server platforms. Users only need a standard web browser installed to access the Portal.

About IndigeTech

IndigeTech helps companies make better business decisions and manage information overload by providing technology solutions such as business intelligence, data warehousing, application integration, and portals. IndigeTech leverages clients' existing technologies and information to provide immediate value, lower costs, and increase productivity.
